CloudWatch Anomaly Report

Generated: 2025-09-04T18:26:41.272Z | Total configs=20 Anomalies: 46

How to read this report (Example):
Suppose for one API's p95 latency we have:

- `Curr` (current window aggregate) = **140 ms**
- `BaseMed` (median of baseline window aggregates) = **100 ms**
- `Δ%` = (140 – 100) / 100 = **+40%**
- `Z` (robust z-score) = (140 – 100) / (MAD × 1.4826) = **5.4** (i.e., 5.4 "typical wiggles" above normal)

If your rule is `|Z| ≥ 3` *and* `|Δ%| ≥ 40%`, this row is flagged as an anomaly.

Legend:

`Series`: Friendly name for the metric (e.g., service + endpoint).

`Stat`: CloudWatch statistic used on each raw point (e.g., `Sum`, `Average`, `p90`, `p95`).

`Agg`: Aggregation applied across the window's points to get one number (`sum` for counts, `median` for pXX latencies, otherwise `average`).

`Curr`: Aggregated value for the **selected window** (e.g., last 60 minutes).

`BaseMed`: **Median** of the aggregated values across the **baseline windows** (e.g., same clock window over the last N days).

`Δ%`: Percent change vs `BaseMed`. Negative = below normal; positive = above normal.

`Z`: Robust z-score = (Curr – BaseMed) / (MAD × 1.4826). ~How many "typical wiggles" away today is from normal.

`Pts`: Number of raw metric points observed in the selected window.

`Base`: Number of baseline windows that had data (ideally equals your configured baselineDays).

`Anom`: "YES" if it meets your anomaly rule (default: Pts ≥ minSamples *and* |Z| ≥ zThreshold *and* |Δ%| ≥ pctThreshold).

Windows used (reference: first config)
Timezone: Asia/Kolkata

Selected window:
`Thu, 04 Sept 2025, 15:56 GMT+5:30 → Thu, 04 Sept 2025, 23:56 GMT+5:30`

Baseline windows (7):

1. `Wed, 03 Sept 2025, 15:56 GMT+5:30 → Wed, 03 Sept 2025, 23:56 GMT+5:30`
2. `Tue, 02 Sept 2025, 15:56 GMT+5:30 → Tue, 02 Sept 2025, 23:56 GMT+5:30`
3. `Mon, 01 Sept 2025, 15:56 GMT+5:30 → Mon, 01 Sept 2025, 23:56 GMT+5:30`
4. `Sun, 31 Aug 2025, 15:56 GMT+5:30 → Sun, 31 Aug 2025, 23:56 GMT+5:30`
5. `Sat, 30 Aug 2025, 15:56 GMT+5:30 → Sat, 30 Aug 2025, 23:56 GMT+5:30`
6. `Fri, 29 Aug 2025, 15:56 GMT+5:30 → Fri, 29 Aug 2025, 23:56 GMT+5:30`
7. `Thu, 28 Aug 2025, 15:56 GMT+5:30 → Thu, 28 Aug 2025, 23:56 GMT+5:30`

If some widgets use different window/baseline settings (e.g., different windowMinutes, baselineDays, timezone, or weekend/holiday rules), their per-widget header below still shows their exact parameters.

Global defaults below reflect each widget's own config (see header line).
